MDO Soffit

PRE-PRIMED MDO - MORE VALUE FOR YOUR PANEL DOLLAR

MDO PLYWOOD is the panel of choice for exterior soffit and trim applications. Eagle's PRIME MDO 303 is manufactured using thermosetting resin-impregnated fiber bonded to the face veneer of the panel. Factory primed and edge-sealed, PRIME MDO 303 is ready for the finish coat.

DESIGNED FOR weatherability and paint adhesion, this durable exterior surface is resistant to moisture and wear. Finishes last up to three times longer than those applied to ACX or BCX plywood. The MDO overlay effectively masks the veneer surface to reduce checking, telegraphing grain and boat patches. You won't find a panel that's easier to finish and maintain.

EAGLE'S MDO 303 has all the proven advantages of plywood's high strength, light weight, stability, and rot resistance. No special tools are required. MDO can be sawn and drilled as your job and imagination require. We offer a complete assortment of sizes and thicknesses including up to 5'x12' in continuous non-scarfed panels. Builders that switch from ACX or BCX to PRIME MDO 303 don't go back. Builders and home owners will appreciate the beauty, performance, and added value of Eagle's PRIME MDO 303 panels.

WE OFFER MORE CHOICES:

- Thickness: 3/8", 1/2", 5/8", 11/16", 3/4", 1", 1-1/8", 1-1/4", 1-1/2"
